

**bunch** is building the backbone of private markets, enabling top funds and investors to operate securely and transact seamlessly

The bunch operating system is designed with GPs at heart and LPs in mind — an advanced workflow management tool that streamlines and automates cumbersome back-office processes and stands as the single source of truth for you to collaborate with your service providers.

With a rapidly growing number of clients across Europe, bunch has a proven track record of freeing up valuable time for fund teams by taking over the fund administration so you can focus on what truly matters: maximizing returns and enhancing the LP experience.
